

Input Function

```
In [2]: userIn = input("Enter your Name")  
        print(userIn)
```

Babar

```
In [4]: inData = input("Enter your message")  
        print(inData, "Good Morning!")
```

Dear Good Morning!

With Integers in inout Function

```
In [7]: intData = int(input("Enter your Integer Data"))  
        print(intData)
```

12

Example 1: Write a program to input 5 integer values and print it in the form of a list in Python.

```
In [16]: intData = int(input('Enter your integer value'))  
         outData = [int(input('Enter your integer value')) for _ in range(intData)]  
         print(outData)
```

[2]

Example 2:

```
In [25]: numbers = []  
         for i in range(5):  
             num = int(input(f"enter your integer value here {i+1}: "))  
             numbers.append(num)  
         print(numbers)
```
